

## WEPS Charger Stabilizing Reamer

**DESIGNED TO HELP REDUCE NON-PRODUCTIVE TIME**

Experience reaming over 500 RWD Jobs and over 5,000,000 feet RWD

Non-productive time contains hidden costs—costs such as short trips, backreaming to the shoe and dedicated clean out runs. The Charger tool reduces or eliminates the costs associated with these type of operations.

Versatile, they can be made of steel or non mag type materials and therefore can be run in a wide range of BHA locations. Additionally, Charger Stabilizing Reamers can run in combination with RSS tools to help provide protection in the event of hole problems.

The patent pending WEPS Charger Stabilizing Reamer is a drilling/completion tool that provides a number of benefits:

- ⚡ Saving rig time by eliminating clean out runs
- ⚡ Reduce the risk of differential sticking
- ⚡ Increase rate of penetration
- ⚡ One piece construction
- ⚡ Control hole deviation
- ⚡ Ream out doglegs
- ⚡ No added torque
- ⚡ Cost effective

Detail: TCI Blocks
